COLLABORATIVE
HYBRID CIRCLE U.

FOR INCLUSION, FLEXIBILITY & INTERNATIONALIZATION

About the HybridCU project

HybridCU focuses on **hybrid teaching*** as a sustainable, innovative solution for intensifying the international and interdisciplinary exchange and collaboration among students and staff of Circle U. partners.
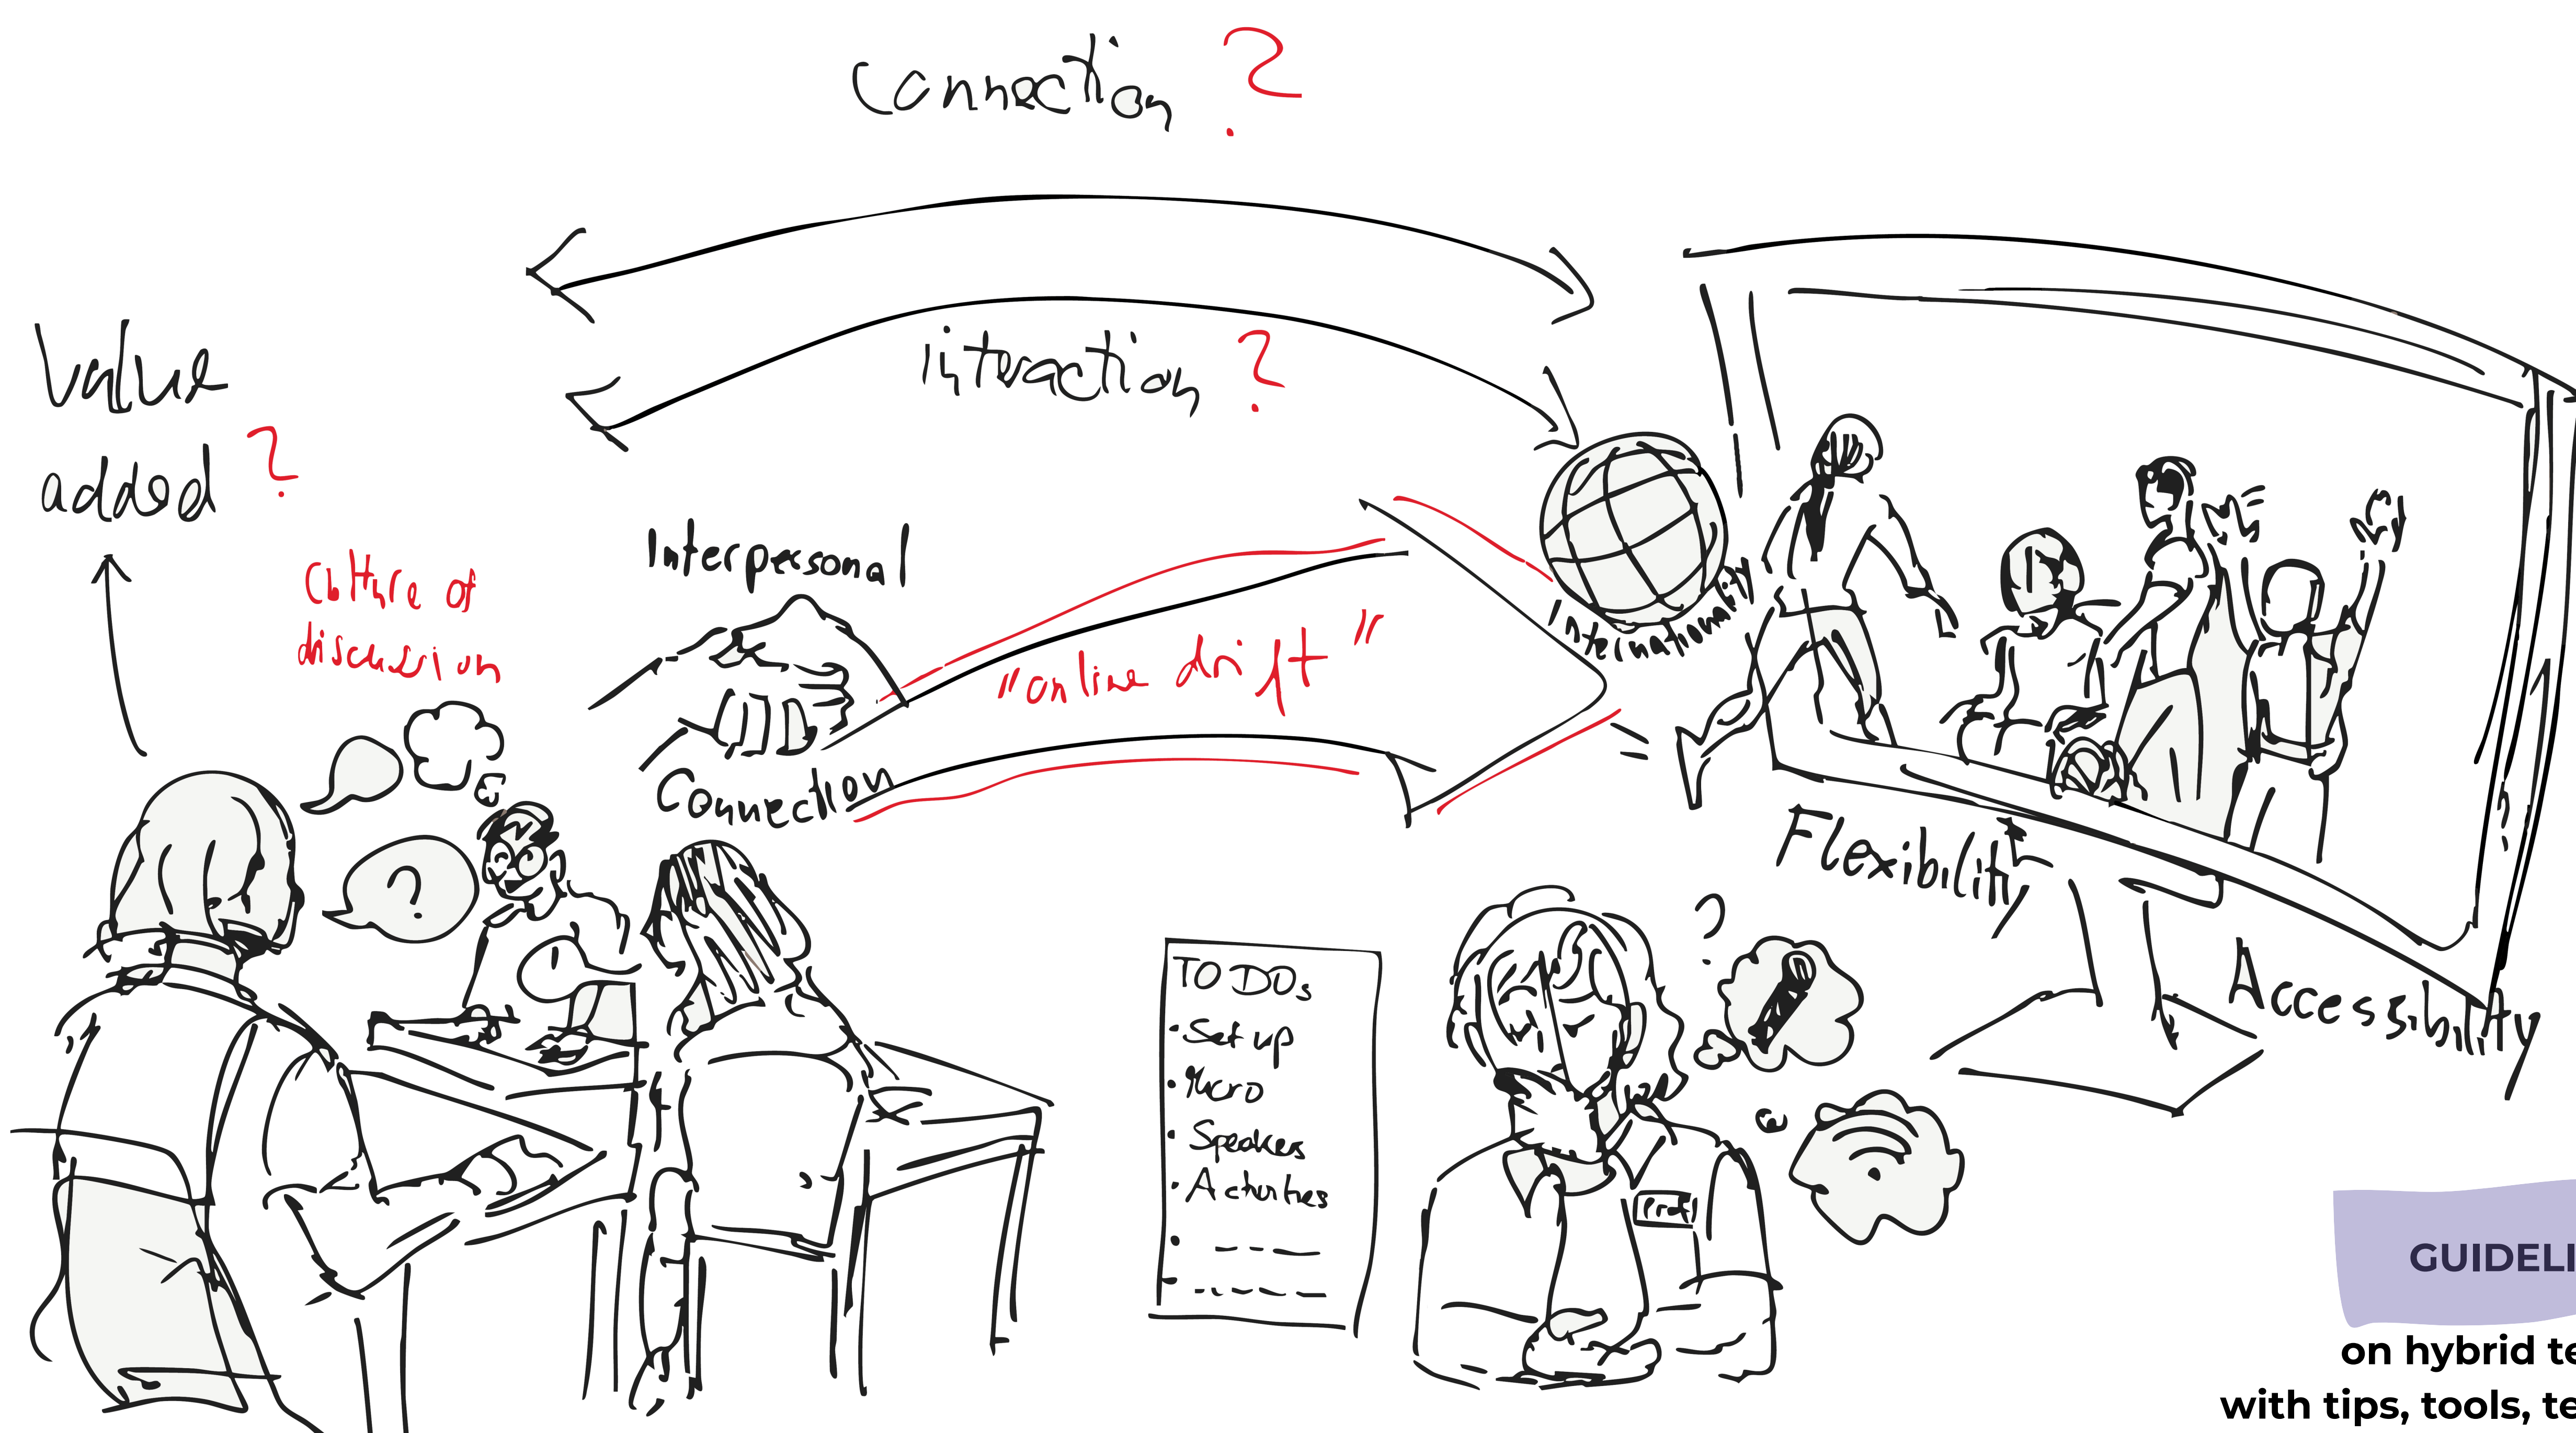

This project, initiated by staff from **Centers for Teaching and Learning** (CTL) and under the umbrella of the **CU.til - Teaching Innovation Lab**, brings together expertise of support staff, student fellows, and educators from **six Circle U. universities** to support teaching staff in implementing hybrid formats, thus offering international experience for as many students and staff as possible.

Our objectives

- Raise awareness of the potential benefits of hybrid teaching for inclusion, flexibility and internationalisation of higher education
- Support the implementation of high-quality hybrid teaching and learning across the alliance
- Foster long-term collaboration and knowledge-exchange between CTLs across the alliance

*Hybrid teaching — simultaneous teaching of in-person and online students

Successful hybrid teaching requires the right combination of **technical** equipment and support, **pedagogical design** and **organisational** considerations

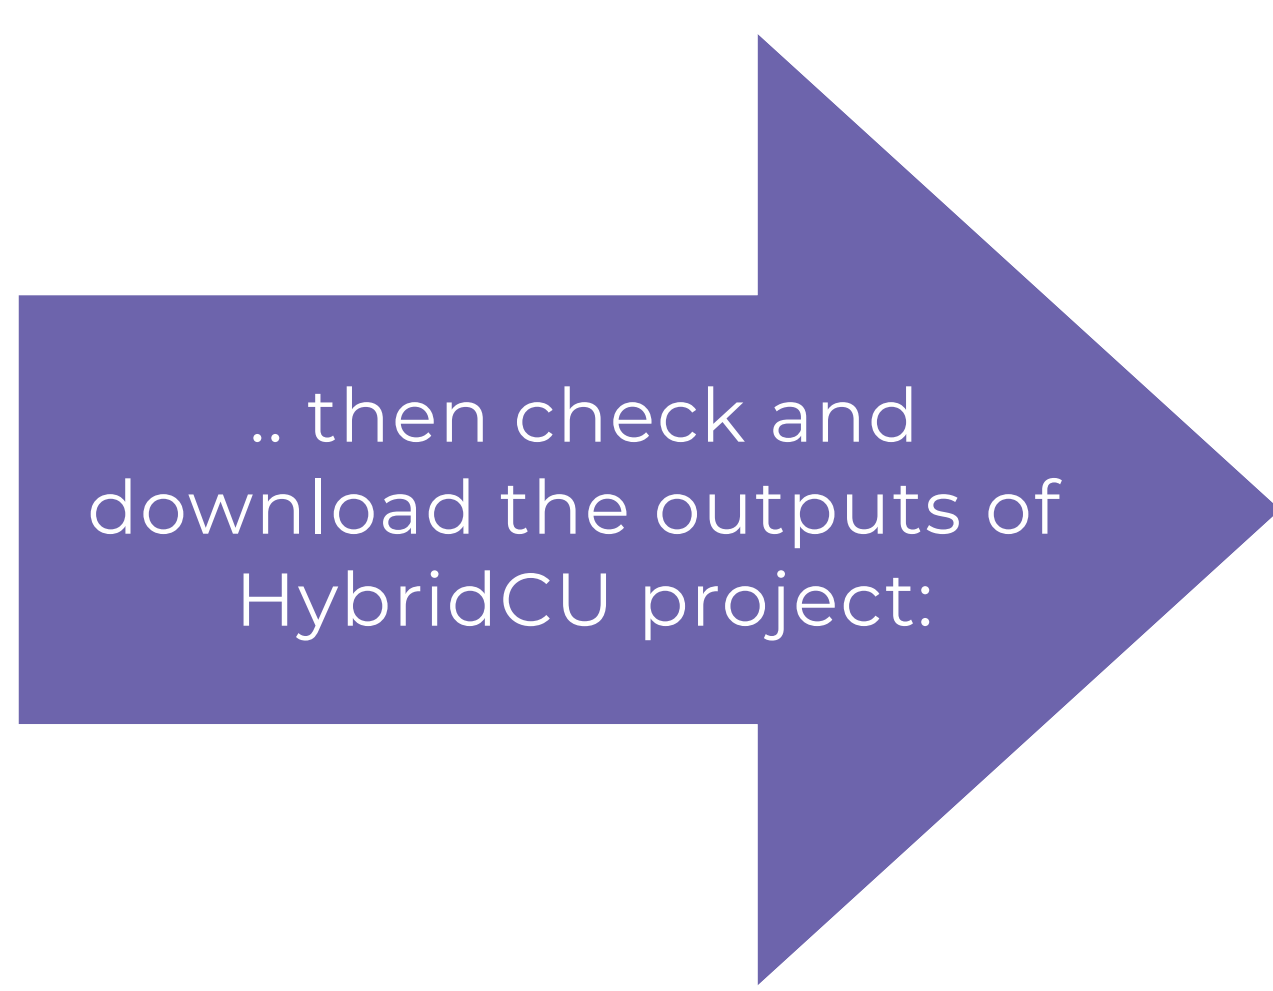

CHALLENGES OF HYBRID TEACHING
Group work result during the training workshop "Hybrid teaching across borders: from ideas to practice", Sept. 2025
@by Aki A. / University of Vienna /

Are you **an educator** looking to offer a hybrid format – to make learning more flexible, inclusive, or international – but feel overloaded while hybrid teaching? Do you feel that in-person and online students do not get the same learning outcomes?

Are you **support staff** wanting to advise educators on how to manage the challenges of hybrid teaching and get the best from this format?

Are you a **student** wanting to find out how to effectively participate in a hybrid course or gain additional digital skills that will boost your future opportunities?

.. then check and download the outputs of HybridCU project:
